Installation Complete
ESXi 5.0.0 has been successfully installed.
ESXi 5.0.0 will operate in evaluation mode for 60 days. To use ESXi 5.0.0 after the evaluation period, you must register for a VMware product license. To administer your server, use the vSphere Client or the Direct Control User Interface.
Remove the installation disc before rebooting.
Reboot the server to start using ESXi 5.0.0.
(Enter) Reboot

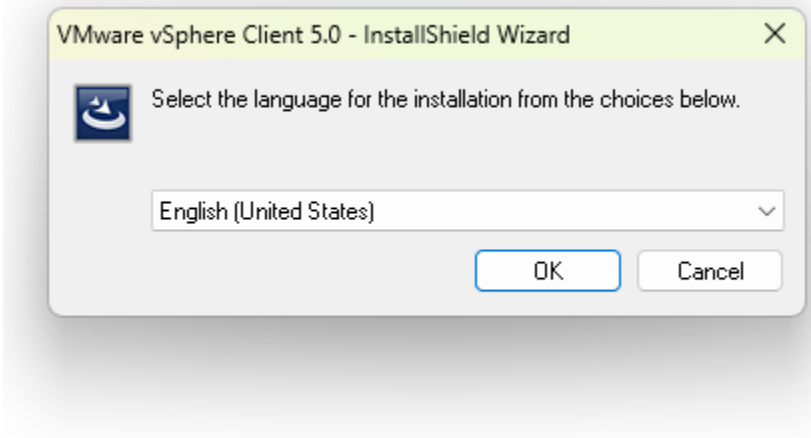

VMware ESXi 5.x (3) - VMware Workstation
VMware Workstation unrecoverable error: (vcpu-0)
Exception 0xc0000005 (access violation) has occurred.
A log file is available in "C:\Users\Lenovo\Documents\Virtual Machines\VMware ESXi 5.x (3)\vmware.log".
You can request support.
To collect data to submit to VMware support, choose "Collect Support Data" from the Help menu.
You can also run the "vm-support" script in the Workstation folder directly.
We will respond on the basis of your support entitlement.

What is a Host?
A host is a computer that uses virtualization software, such as ESX or ESXi, to run virtual machines. Hosts provide the CPU and memory resources that virtual machines use and give virtual machines access to storage and network connectivity.
You can add a virtual machine to a host by creating a new one or by deploying a virtual appliance.
The easiest way to add a virtual machine is to deploy a virtual appliance. A virtual appliance is a pre-built virtual machine with an operating system and software already installed. A new virtual machine will need an operating system installed on it, such as Windows or Linux.
